## OUR VISION IS TO GUIDE OUR CLIENTS TOWARDS A LIFESTYLE OFF A MAGAZINE COVER.

Thanks to the experience gained over the years, we have become a point of reference for contractors who operates in the sector of luxury hotel furnishings.

In fact, we take care of the entire production chain, from on-site surveys, to executive planning, to the creation of wall and ceiling coverings, flooring, headboards and custom-made elements for both rooms and common areas, up to their transport and assembly on site.

In the hotel sector, furnishings play a crucial role. For this very reason, it is very important not to leave anything out and to take care of every single element that is placed at the hotel's ambience.

One of our characteristics is the use of fine and carefully selected materials.

Woods such as teak, canaletto walnut, oak are chosen not only for their elegance, but also for their resistance and durability.

In the choice of material, it is often the details that make the difference: bronze finishes, certain and particularly worked marbles add a touch of refinement to the final design. For not only visual but also tactile pleasure, we carefully choose the various fabrics for curtains and upholstery; fabrics such as leather, cashmere, cotton and silk are finely crafted to achieve maximum comfort and aesthetics.

The union between excellent materials and our artisanal workmanship allows us to create furniture that becomes true masterpieces, creating personalized and distinctive environments.

To be sure of obtaining optimal results, it is necessary to contact a specialized company like ours, capable of translating the customer's requests into functional and effective solutions.

The MDA srl company has been operating in the custom-made furniture production and installation sector for many years, providing 360-degree services. In fact, we can offer:

- 3D survey with laser tools to design the environments to be created directly in the exact dimensions of the space to be built, thus reducing the possibility of error and carrying out most of the work in the company and not on site, being able to already prepare all the strips to the correct size.
- Executive design both 2D and 3D; 2D design is used for the development of the shop drawings mainly of the rooms, while 3D design is used for the development of the shop drawings of the common areas and the boiserie, so as to be able to visualize them as a whole and avoid errors that could arise with a 2D design only.
- Supply and installation of custom-made furniture, including material sampling for approvals, finishes other than wood such as metals, fabrics, leather and anything else necessary for the production according to the project of the artefacts subject to the contract. All the materials produced are pre-assembled in the rough to verify their correctness and only after having passed this quality control step, are they disassembled and taken to painting.
- Packaging, transport and assembly of the product material, taking care, especially during the installation phases on the construction site, to use the same personnel who pre-assembled the raw product so that the personnel is already trained on what needs to be assembled on the construction site, reducing the waste of time that can be generated when on large construction sites the personnel employed in the installation are not trained on the product to be assembled.
- After-sales assistance; once the construction site in question has been delivered and opened, the MDA company also offers ordinary and extraordinary maintenance service, so as to be able to intervene with conscience and knowledge of what was previously assembled, in a timely manner when any problems arise and in a programmed to prevent the occurrence of such problems.

These procedures have led the company to establish itself nationally and internationally, and to acquire construction sites all over the world.
